

THE FEW INSTITUTE  
for AESTHETIC PLASTIC SURGERY

## Ultherapy™ Patient Consent

In considering an Ultherapy™ treatment with the Ulthera System™, please read the following information carefully and discuss any questions you may have with your physician.

The Ulthera™ System delivers a low amount of focused ultrasound energy to the skin. The heat from the ultrasound stimulates new collagen to form. I understand that there may be some discomfort during the treatment when the ultrasound is being delivered.

As with all medical procedures, there are possible post-procedure effects and risks associated with treatment. Immediately following the Ulthera treatment, the skin may appear red or slightly swollen in select areas, which may last up to two hours or longer.

There may be slight tenderness and tingling in the treated area for a few hours after treatment.

Unlikely, but potential, temporary effects include, but are not limited to, bruising, pigmentation changes or reduced sensitivity to touch. These would be mild in nature and would resolve in a few days or longer. There is also a remote risk of scarring, or motor nerve injury.

It has been explained to me that the results vary from patient to patient, that in infrequent cases results are not apparent, and that the procedure does not address every age-related issue on the surface of the skin.

I have read and understand all information presented to me and authorize the medical practice of The Few Institute for Aesthetic Plastic Surgery to administer the Ultherapy procedure on me.
